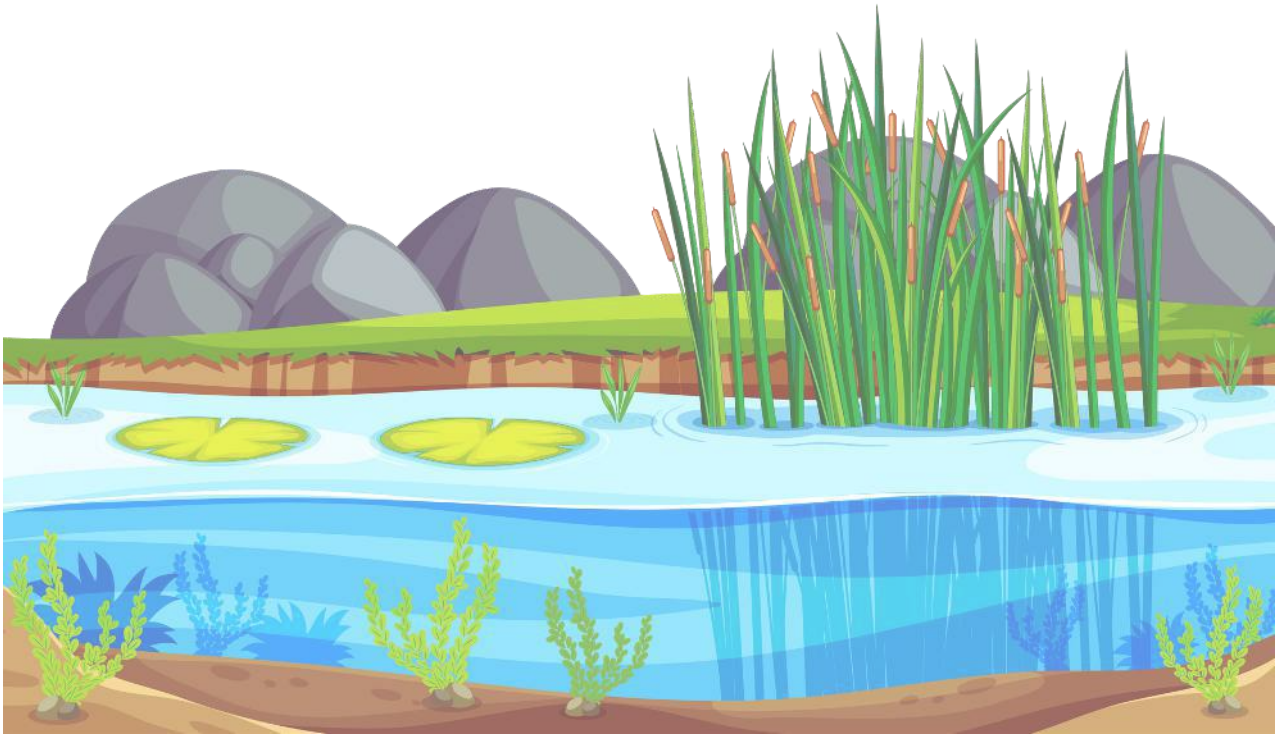
Design Your Dream Pond

Before you grab a shovel or head to the landscape yard, this quick worksheet helps you:

- Get your vision clear
- Understand what you already know
- Spot what still needs figuring out

Whether you're building a small wildlife pond, a koi haven, or a full-feature waterfall, this sheet helps you start smart — even if you're brand new.

This is the checklist I walk through before I start.



Your Pond Planning Checklist

- [ ] Pond size roughly worked out (Length × Width × Depth)
- [ ] What will live in the pond? Tadpoles, fish, ducks, turtles?
- [ ] What sort of filtration will I use? Bog, Skimmer, Intake bay, High flow filter?
- [ ] Are there going to be any streams or waterfalls?
- [ ] Will I need to add additional aeration or water movement?
- [ ] Do I need to be worried about pond overflows and the amount of water in motion?
- [ ] Have a rough sketch of the layout including the filters, stream/ waterfalls, jets & aerators
- [ ] Based on the information I have what sort of pump or pumps am I going to use?
- [ ] Figure out roughly what material I need & how much it will cost

Fill in the Blanks

To help you fill in the blanks you can use my blueprint (the exact system I use), it's helped people all over the world. You'll also have access to the private ozpond community and my Virtual Kev AI tool 24/7.

You can learn more about the blueprint, community and Virtual Kev by clicking this link.
